Today's work is in folder: simplyBlogging

Step1: I have created simplyBlogging folder and saved three files: functions.js, home.html, and style.css.

Step2: In HTML file I used bootstrap CSS and the grid layout

Step3: in the Javascript file I added all the functions to read user input, save it in a session, retrieve from session, then dynamically creating html tags and display the input of user in these tags

Step4: I created one CSS file and two classes in it
